PD-97975A

Radiation Hardened Power MOSFET Surface Mount (SMD-0.2 Ceramic Lid) 60V, 25A, N-channel, R9 Superjunction Technology

Features

- Single event effect (SEE) hardened (up to LET of 90 MeV/mg/cm²)
- Low $R_{DS(on)}$
- Fast switching
- Low total gate charge
- Simple drive requirements
- Hermetically sealed
- Ceramic package
- Light weight
- Surface mount
- ESD rating: Class 1C per MIL-STD-750, Method 1020

Potential Applications

- Isolated DC-DC converter
- Motor drives
- Point-of-Load (PoL) converter

Product Validation

Qualified to JANS screening flow according to MIL-PRF-19500 for space applications

Description

IR HiRel R9 technology provides superior power MOSFETs for space applications. These devices have improved immunity to Single Event Effect (SEE) and have been characterized for useful performance with Linear Energy Transfer (LET) up to 90MeV/(mg/cm²). Their combination of low $R_{DS(on)}$ and fast switching times will allow for better performance in applications such as DC-DC converter or motor drives. These devices retain all of the well established advantages of MOSFETs such as voltage control, fast switching and temperature stability of electrical parameters.

2.4 Radiation Characteristics

IR HiRel Radiation Hardened MOSFETs are tested to verify their radiation hardness capability. The hardness assurance program at IR HiRel is comprised of two radiation environments. Every manufacturing lot is tested for total ionizing dose (per notes 3 and 4) using the TO-3 package. Both pre- and post-irradiation performance are tested and specified using the same drive circuitry and test conditions in order to provide a direct comparison.
