

# RADIATION HARDENED **POWER MOSFET** THRU-HOLE (Low-Ohmic TO-257AA)

## **Product Summary**

| Part Number   | <b>Radiation Level</b> | RDS(on)      | Ι <sub>D</sub> | QPL Part Number |
|---------------|------------------------|--------------|----------------|-----------------|
| IRHYS9A7034CM | 100 kRads (Si)         | 19m $\Omega$ | 30A*           | JANSR2N7647T3   |
| IRHYS9A3034CM | 300 kRads (Si)         | 19m $\Omega$ | 30A*           | JANSF2N7647T3   |

### Description

IR HiRel R9 technology provides superior power MOSFETs for space applications. These devices have improved immunity to Single Event Effect (SEE) and have been characterized for useful performance with Linear Energy Transfer (LET) up to 90MeV/(mg/cm<sup>2</sup>). Their combination of low RDS(on) and faster switching times reduces the power losses and increases power density in today's high speed switching applications such as DC-DC converters and motor controllers. These devices retain all of the well established advantages of MOSFETs such as voltage control, fast switching, ease of paralleling and temperature stability of electrical parameters.

## Features

- Low RDS(on)
- Fast Switching
- Single Event Effect (SEE) Hardened
- Low Total Gate Charge
- Simple Drive Requirements
- Hermetically Sealed
- Electrically Isolated
- Ceramic Eyelets
- Light Weight
- ESD Rating: Class 2 per MIL-STD-750, Method 1020

### Absolute Maximum Ratings

- $\odot$  Total Dose Irradiation with V<sub>GS</sub> Bias. 12 volt V<sub>GS</sub> applied and V<sub>DS</sub> = 0 during irradiation per MIL-STD-750, Method 1019, condition A.
- S Total Dose Irradiation with V<sub>DS</sub> Bias. 48 volt V<sub>DS</sub> applied and V<sub>GS</sub> = 0 during irradiation per MIL-STD-750, Method 1019, condition A.

# **Radiation Characteristics**

IR HiRel Radiation Hardened MOSFETs are tested to verify their radiation hardness capability. The hardness assurance program at IR HiRel is comprised of two radiation environments. Every manufacturing lot is tested for total ionizing dose (per notes 5 and 6) using the TO-3 package. Both pre- and post-irradiation performance are tested and specified using the same drive circuitry and test conditions in order to provide a direct comparison.

## Table1. Electrical Characteristics @ Tj = 25°C, Post Total Dose Irradiation 56
