POWER MOSFET THRU-HOLE (TO-257AA)

IRFY130C,IRFY130CM 100V, N-CHANNEL HEXFET® MOSFET TECHNOLOGY

Product Summary

| Part Number | RDS(on) | ΙD | Eyelets |
|-------------|---------|-------|---------|
| IRFY130C | 0.18 Ω | 14.4A | Ceramic |
| IRFY130CM | 0.18 Ω | 14.4A | Ceramic |

HEXFET® MOSFET technology is the key to International Rectifier's advanced line of power MOSFET transistors. The efficient geometry design achieves very low on-state resistance combined with high transconductance. HEXFET transistors also feature all of the well-established advantages of MOSFETs, such as voltage control, very fast switching, ease of paralleling and electrical parameter temperature stability. They are well-suited for applications such as switching power supplies, motor controls, inverters, choppers, audio amplifiers, high energy pulse circuits, and virtually any application where high reliability is required. The HEXFET transistor's totally isolated package eliminates the need for additional isolating material between the device and the heatsink. This improves thermal efficiency and reduces drain capacitance.

Features:

- Simple Drive Requirements
- Ease of Paralleling
- Hermetically Sealed
- Electrically Isolated
- Ceramic Eyelets
- Ideally Suited for Space Level Applications

Absolute Maximum Ratings

| | Parameter | | Units |
|--|---------------------------------|--|-------|
| ID @ VGS = 10V, TC = 25°C | Continuous Drain Current | 14.4 | |
| ID @ VGS = 10V, TC = 100°C | Continuous Drain Current | 9.1 | A |
